PROBABLY THE WORLD'S BEST CORROSION PROTECTION!

WELDABLE
TOP-COATABLE
HEAVY METAL FREE

LENNEZINK® - Probably the world's best corrosion protection!

Extremely thin, optimally durable

With the help of the zinc flake coating, a cathodically protective layer is applied without current. Additional top coatings increase performance. The LENNEZINK®-zinc flake coating system consists of LZ 2 (base coat) and LZ Topcoat (top coat). They result in an optimally coordinated system with multifunctional properties:

- high cathodic protection against corrosion
- defined friction and screwing properties
- good adhesion and abrasion resistance
- high chemical resistance
- electric conductivity
- very thin layer (10–15 µm)
- conserve resources

With a layer thickness of just a few micrometers, the zinc-flake coating system achieved a durability of a **thousand hours** in the salt spray test.
